

## Extra-aeronautical billing system

### The billing solution for airport space leases

ATLAS is a user friendly extra-aeronautical billing application that covers all the invoicing needs of airports in terms of space billing.

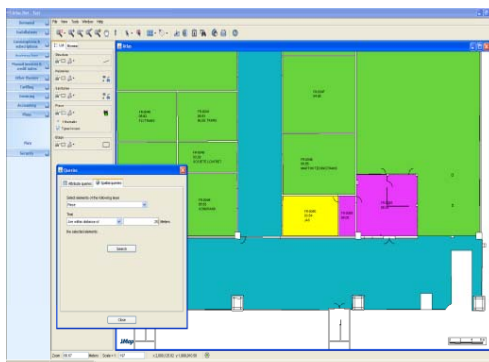

The new ATLAS version has been entirely redesigned and offers simplified invoice management. The system generates periodic bills covering space, equipment, utilities and business fees. It also includes a module for manual billing.

Based on RESA user generic interfaces, this latest version offers direct access to data, complete control over user rights and flexible configuration options.

#### Space billing

ATLAS handles invoicing for rent and associated fees (cleaning, air conditioning, etc.) to tenants of the airport. The charges are calculated based on an official agreement and are automatically adjusted in the event of changes or early termination.

Code	Libelle	Unité	Quantité	Taux	Montant	Statut	Observations
101	101	m2	100	100	10000	OK	
102	102	m2	50	50	2500	OK	
103	103	m2	25	25	1250	OK	
104	104	m2	12	12	600	OK	
105	105	m2	6	6	300	OK	
106	106	m2	3	3	150	OK	
107	107	m2	1	1	50	OK	
108	108	m2	0	0	0	OK	
109	109	m2	0	0	0	OK	
110	110	m2	0	0	0	OK	
111	111	m2	0	0	0	OK	
112	112	m2	0	0	0	OK	
113	113	m2	0	0	0	OK	
114	114	m2	0	0	0	OK	
115	115	m2	0	0	0	OK	
116	116	m2	0	0	0	OK	
117	117	m2	0	0	0	OK	
118	118	m2	0	0	0	OK	
119	119	m2	0	0	0	OK	
120	120	m2	0	0	0	OK	

An interface\* provides a graphic view of the space to aid in decision making.

Users can access data about the space from the map and vice versa. There is also a search function, for instance, to find unoccupied spaces larger than 20 m2 or all the spaces leased by one occupant.

#### Equipment billing

ATLAS generates invoices for equipment (phone outlets, furniture, etc.). Each item is allocated to a client as from a specific date. They can either be billed in advance or at the end of a fixed period. As with space billing, adjustments are automatically made for any change in quantity or termination date.

A mobile application provides inventory management on a Tablet PC. The database is updated with the new data when the user returns to his office.

Special invoices and credit notes can be issued with the integrated manual billing module.

\* Optional functionality

# Extra-aeronautical billing system

## Flexible system

### Utilities billing

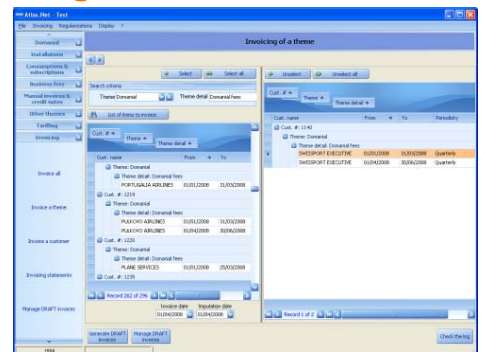

ATLAS generates invoices for utilities (electricity, water, phone, etc.). The charges are applied to the client and invoiced at the end of a specific period. The amount billed is based on exact figures read from the meter or a flat fee entered by the user. The system can also import files generated by remote meter reader systems\*.

### Business fees billing

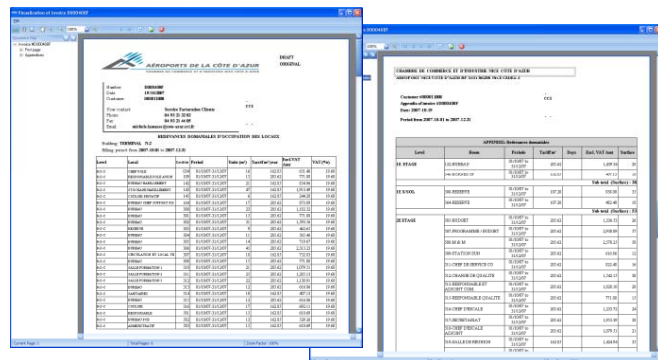

ATLAS also generates invoices for business fees. These fees are calculated based on a fixed rate amount or a percentage of the sales the tenants expect to do. Adjustments are made automatically if there are any changes after invoicing.

### Flexible configuration and printing

This new version enables users to configure and print invoices easily. Users can select items to bill together or on separate invoices.

The system can create draft invoices, allowing the user to check and cancel the invoice if needed. The draft can also be sent by email to the customer for validation.

ATLAS includes an alert system configurable by the user. Alert emails are automatically sent out to a user-defined mailing list when user-defined events occur, such as changes (client name), upcoming events (expiration of a convention) or unusual meter readings (high water consumption).

ATLAS interfaces with the main standard accounting systems on the market (LINEAL, ADONIX, COMPTAREL, SAGE, etc.) for easy automatic data imports and no manual entries.

ATLAS can export data and invoices to the main standard formats: Excel, HTML, PDF, XML, TXT, etc.

Please feel free to contact us for detailed documentation about ATLAS.
